To Whom It May Concern:

Bill Smith Electric Company has provided electrical services for several projects designed by Bay Design Associates Architects over the past five or six years including the nearly-completed \$14 million Shoal River Middle School in Crestview, Florida, emergency generators for Florida Department of Health buildings, and electrical systems for miscellaneous school additions/renovations in Escambia County, FL. In each instance, their field and office staffs have presented a professional attitude.

The electrical systems and components for the projects were installed in accordance with plans and specifications making construction observation a simple task. As construction progresses the staff are looking ahead to determine if there are any potential conflicts or problems that need to be addressed before they become a problem. This allows the engineers adequate time to assess the situation and make necessary corrections or adjustments well before they become significant cost issue.

I highly recommend Bill Smith Electric for your proposed project.

Sincerely,

Walter J. Smith, Architect
